	PRODUCT FACTS (Cont)
Controls	Indoor or General Household Pests Outdoor/Perimeter Pests Wood-Infesting Pests For list of specific insects, see inside.
Where To Apply	Apply where pests have been seen or found, or can find shelter. • In and around buildings and structures.
Dilution Rates	 When 0.27 fl oz (8 milliliters) is diluted in one gal of water, the combined active ingredient concentration (0.075%) contains 0.05% Imidacloprid and 0.025% β-Cyfluthrin. When 0.54 fl oz (16 milliliters) is diluted in one gal of water, the combined active ingredient concentration (0.15%) contains 0.10% Imidacloprid and 0.05% β-Cyfluthrin.
Mixing In- formation	 Mix the appropriate amount of Temprid SC Insecticide with water. Add product when filling spray tank with water; shake or agitate mixture. Diluted spray mixture can be stored overnight. Agitate before using.
How To Apply	General surface (outdoors only), spot treatment, and void injections by mist, foam or crack & crevice sprays.
Re-Apply	 Every 7 to 10 days, if needed. Do not apply more than 32.0 fluid ounces of Temprid SC Insecticide per acre, per year. [Maximum annual use of 0.5 pounds of imidacloprid and 0.25 pounds of β-cyfluthrin per acre, per year.] At the 8 milliliter per gallon use rate, this is a limit of 18 dilute gallons per acre, per year and at the 16 milliliter per gallon use rate, this is a limit of 59 dilute gallons per acre, per year.
Re-Entry	Do not contact treated surfaces until dry. People and pets may re-enter after the treated area is dry.

	DIRECTIONS FOR USE of Federal law to use this product in a manner inconsistent with its labeling.

4"

FOR RESIDUAL PEST CONTROL IN BUILDINGS, STRUCTURES, AND MODES OF TRANSPORT Use Temprid SC Insecticide as a spot spray or crack & crevice treatment inside buildings and structures. This includes schools, factories, stores, warehouses, hospitals, food processing facilities (non food/feed areas), and modes of transport. For a list of common facilities where this product may be used, see Appendix.

continued

	pattern nozzle, or applicator equipment that delivers low volume treatments. Mist Use appropriate mist generating equipment. Do not allow mist to drift out of void spaces into commonly occupied areas of the structure. Foam: Use appropriate foam generating equipment to supply a sufficient volume of foam. Mix the dilution with manufacturer's specified volume of foaming agent.
	 When pests are seen or found. Re-apply every 7 to 10 days if needed.
Restrictions	 Do not apply in food/feed areas of food and feed handling establishments. Do not apply broadcast treatments to floors or floor coverings. Do not apply in hospital and/or nursing home rooms while they are occupied. Do not apply in classrooms while they are occupied. Do not apply wexcessive dripping or run-off to occur from vertical or overhead surfaces. Do not apply where electrical short circuits can occur; use a dust or dry bait in these areas. Do not apply be dilens or other materials which come in direct ordiact with humans will occur. Do not apply bed linens or other materials which come in direct ordiact with ourgants of the bed Do not apply more than 5 gallons of diluted product indoors per individual applicator per day.
APPLICATI	DN FOR INDOOR PESTS
Crawling Inser Cockroaches, Crickets, Silver- fish, Spiders, an	Treat entry points such as around water pipes, doors, windows, and eaves. Treat areas where pest mornally feed or hide such as baseboards, corners, around water pipes, under refrigerators, cabinets d sinks, and stoves, being sure to spray cracks & crevices. Spot treat floor or rugs beneath furniture;
other listed pes	For more difficult to control pests, like certain spiders, direct contact spray is required for effective con trol.

			0.54 (16)	1 2 3 4 5	0.150% 0.075% 0.050% 0.038% 0.030%				
		var		e treated. For example, mulch	ssive dripping or run-off. Volume ca requires more spray than bare so				
	When To Apply	 When pests are seen or found. Re-apply every 7 to 10 days if needed. Do not apply more than 32.0 fluid ounces of Temprid SC Insecticide per acre, per year for landscape and lawn applications. [Maximum annual use of 0.5 pounds of imidacloprid and 0.25 pounds of β-cyfluthrin per acre, per year] At the 8 milliliter per gallon use rate, this is a limit of 118 dilute gallons per acre, per year and at the 16 milliliter per gallon use rate, this is a limit of 59 dilute gallons per acre, per year for landscape, and lawn applications. 							
	Application Restrictions	Do not apply directly to impervious horizontal surfaces such as sidewalks, driveways, and patios except as a spot or crack and crevice treatment. During application, do not allow pesticide to enter or run off into storm drains, drainage ditches, gutters, or surface waters. All outdoor applications, if permitted elsewhere on this label, must be limited to spot or crack-and-crevice treatments only, except for the following permitted uses: 1. Applications to asi) or vegetation, as listed on this label, around structures; 2. Applications to lawns, and other vecetation. as listed on this label:							

Occasional in- vaders Boxelder bugs, elm leaf beetle, stink bugs, and other listed pests	Apply directly to insects that have congregated around doors and windows and similar areas where they may enter structures. Apply perimeter treatment as described above.
Centipedes, ear- wigs, millipedes, pill bugs, sow bugs, springtails, etc.	Apply perimeter treatment to reduce the number of insects from entering the structure. Thoroughly treat mulched areas. Correcting moisture problems around the structure will reduce pest pressure.
Fire Ants	Use Rate: 0.15% 0.54 fl oz (16 milliliters) of Temprid SC Insecticide per gal of water. Thoroughly drench or inject the entire mound. When using injection treatment, you must treat the bottom of the mound. Apply dilution or foam using a downward and upward motion of the injector tool. For complete distribution, inject in several points throughout the mound. Treat new mounds as they appear. • Do not use in pastures or areas of food crop production.
Fleas & ticks (In- cluding ticks that may transmit Lyme Disease and Rocky Mountain Spotted fever)	For fleas and ticks, treat likely harborage areas like along footpaths or in lawns. For fleas, concen- trate treatments in areas where pets are known to rest, as these areas are larval breeding ho spots. Fleas and ticks may be re-introduced from surrounding areas by host animals.
House flies and Cluster flies	Apply low-volume mist or spray to outside surfaces of buildings, porches, patios, garages, fences, and other areas where house flies rest. Cluster flies: Treat in late summer or fall, just before cluster flies begin looking for winter shelter. Spray siding, eaves, around windows and doors, window screens, and attics. To help reduce infes- tations, treat cracks & crevices, attics, and other indoor winter hiding places.
Scorpions	Treat around piles of firewood and other areas where scorpions may hide. When possible, remove piles of materials that can harbor the pests. Apply a perimeter treatment. Do not treat firewood with this product.

4

APPLICATION FOR WOOD-INFESTING PESTS (Cont)			
Carpenter ants	 Homes and other structures: Apply around doors and windows and other places where car penter ants may enter. Spray or foam into cracks & crevices, or spray, mist, or foam throug small drilled holes into voids where ants or nests are present. Use enough spray or foam the cover the area. Inside trees, utility poles, fencing and decking materials and similar structural members, drill trind the interior infested cavity and inject spray, mist, or foam into may splashack guard. Tunneling in solit. Apply as a soil drench or inject the dilution or foam into the soil at interval or 8 to 12 inches. Use f galon of dilution per 8 sq ft. Treat along the edge of walls, driveway or other hard surfaces where ants are tunneling beneath the surface. Protecting frewood from carpenter ants; Treat soil beneath firewood before stacking at galon of dilution per 8 sq ft. Do not treat firewood with this product. It is recommended to remove or prune away any shrubbery, bushes, and tree branches touching the structure. Vegetation touching the structure without coming in contact with the treatment 		
Carpenter bees	In or on structures: Apply as a spray or mist, or sufficient volume of foam, directly into galler entrance holes. Leave entrance open to be sure that returning adult bees are killed. Exterior wood surfaces may be treated by general surface application to prevent nest cavity ex cavation by adult carpenter bees.		

STORAGE AND DISPOSAL

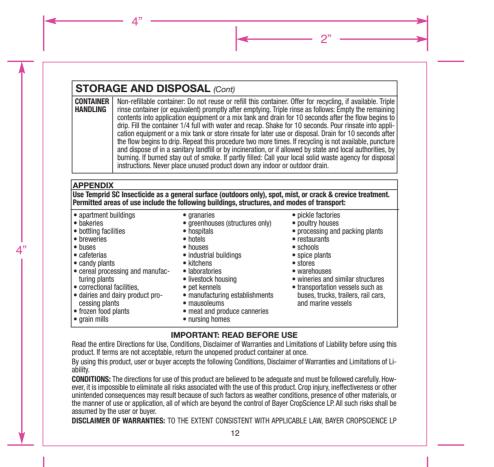

Do not contaminate water, food or feed by storage or disposal.

4"

PESTICIDE Storage	Mix as needed. Store in original container in a secured dry storage area. Avoid extremes in temper- atures. Prevent cross-contamination with other pesiticides and fertilizers. If the container is leaking and/or material is spilled, on floor or paved surfaces, absorb on sawdust or other commercially avail- able absorbing material, sweep up and remove to chemical waste area for your disposal. Concentrate is stable at normal storage temperatures.
PESTICIDE DISPOSAL	Wastes resulting from the use of this product may be disposed of on site or at an approved waste disposal facility.
